www.dentalimplantsoflancaster.com

All dental treatment performed in one office location with one doctor, who has extensive training in the area of dental implants and full mouth reconstruction. Dr. Shea F. Stevens believes that there is better quality control when patients do not have to go from office to office. "When patients feel comfortable with one doctor, it is a better experience." Treatment can take place in a timely manner because the patient does not have to worry about the schedules of different offices, and Dr. Stevens does not have to wait for clearance to proceed to the next treatment steps. Dr. Stevens has gone through thousands of hours of advanced surgical and restorative training in the area of dental implants. He has been through a one-year maxicourse residency at NYU Dental School for Dental Implants, Misch Institute for Dental Implants, Russo Institute, Prosthodontics Intermedica Facial Esthetic Institute, and he is a fellow of the International Congress of Oral Implantologists. Dr. Stevens will continue to educate himself in order to provide the best-quality dental care for his patients.

Multiple Dental Procedures and Only One Dentist Smiles by Stevens | Dental Implants of Lancaster

Creating confidence...
 one *smile* at a time.

Shea F. Stevens, DMD, FICOI

- Dr. Shea F. Stevens specializes in cosmetic and implant dentistry. His dental practice has earned **BEST DENTAL PRACTICE IN LANCASTER** in 2011 and 2012, and **PA's TOP 20 DENTISTS** in 2010 and 2011.
- Dr. Stevens trained at Temple University School of Dentistry for his DMD degree and furthered his postgraduate education at New York University by completing a surgical residency in oral implantology.
- One of the youngest dentists to receive his **Fellowship status in the International Congress of Oral Implantology**.
- Lectures and writes journal articles on dental implants.
- Provides dental implant consultation and surgical placement of dental implants for 12 Pennsylvania dental offices.
- Dr. Stevens completed the prestigious **MISCH INTERNATIONAL IMPLANT INSTITUTE**, which is a world-renowned training center for implant dentistry.

He maintains memberships in the American Academy of Cosmetic Dentistry, American Academy of General Dentistry, Lancaster Seattle Study Club, Lancaster County Dental Implant Study Club, College of Conscious Sedation, Fellow of International Congress of Oral Implantology, MISCH International Implant Institute, and Academy of Facial Aesthetics.

Dr. Shea F. Stevens has always wanted to provide modern, state-of-the-art treatment for his patients in Lancaster, Pa. He has pursued top-notch training to be proficient in dental implants. Dental implants are now the standard of care and are the best treatment option to replace missing teeth, with a proven success rate of 95% over 20-year studies. No other treatment has been shown to be this successful.

Dr. Shea F. Stevens resides in Lancaster, Pa., with his wife Aileen, beautiful daughter Rowan, handsome son Colton, and his dogs Bubba and Jada. He still plays soccer in a men's league and trains at CrossFit. Dr. Stevens trains for military-style mud runs, which are trail runs with obstacles and mud! He loves his family and looks forward to spending every free moment with them.

New Technology Gives Hope to Those Previously Rejected for Dental Implants

When placing a dental implant, there is a requirement for width and height of bone structure to allow for a successful implant. Unfortunately, when a tooth is removed from the mouth and a bone graft is not placed to stabilize bone loss, the candidacy for dental implants is severely reduced.

Dr. Stevens has been successfully restoring hope to patients who have a bone width deficiency for years, allowing them to enjoy the benefits of dental implants through grafting procedures. Bone height deficiencies have been a different story, until now!

In the beginning of April, Dr. Stevens flew to Arizona to learn a progressive and exciting technique that allows our office to now, not only regain the width but the height of the jaw bone to an adequate level for dental implants.

Dr. Stevens is encouraging those who have one or more missing teeth to schedule a free consultation to learn about restoring the function of their bite through dental implants and grafting techniques.
